

Modelled suspended sediment lead concentrations in the Peak District

James Rothwell, Martin Evans, John Lindsay, Tim Allott
(Manchester Metropolitan University and The University of Manchester)

Computer modelling techniques and environmental monitoring have been used to produce this map of lead contamination in Bleaklow catchments. Lighter areas indicate higher suspended sediment lead concentrations.

This entry was commended in the 'Science meets the eye!' exhibition - a celebration of upland research in the Peak District. Organised by the Moors for the Future partnership. For more information www.moorsforthefuture.org.uk
